

WSP

WEB STANDARDS PROJECT

WELCOME!

Hello, and welcome to the first week of Web Standards Project. My name is Josh Bloom and I will be your instructor. For this course, we are going to be little kids again and ask 'Why.' You have all learned so much already, but with such a fast pace that it becomes ever increasingly more difficult to slow down, practice what you have learned, and ensure that you truly understand the why.

Now while the name might imply it, you will actually not be creating a complete website. Instead, your focus will be on the creation of unique components. Small pieces of a website that can be reused in any number of future projects. By the end of class you will have your own library of assets which could be used to make many different websites.

Each week we will progress through a traditional production process to build out our components. Grades will reflect not just the accomplishment of the task, but on your ability to explain the theory behind the decisions you have made.

1. Week 1: Analyzing Design
2. Week 2: Developing Structure
3. Week 3: Applying Styling to Match Design
4. Week 4: Post-Mortem & Advanced Techniques

Let's have a great month, and again, welcome to WSP!

JOSH
